

# Lynx | Transport Management System

**Enhance transportation visibility and optimize transportation management with Lynx, a web-enabled collaborative information platform which captures all steps and events from transport order to freight settlement.**

**With its sophisticated transportation planning, Lynx is capable of consolidating and deconsolidating the loads across different modes and in different legs to optimize transportation costs.**

## Values

### Centrality & visibility of shipping details

With high quality data and function which provides all transport partners with a shared view of the supply chain. Transport partners are able to view web order entries, query shipment status, track and track shipment and subscribe to event alerts and updates to shipment movements.

### Enhanced shipment control & real-time dynamic reporting

Through an agile event and alerts system which reports disruptions/ anomalies in shipment movements.

### Tailored KPI modules

Allows businesses to measure the quality and reliability of carriers and reporting performance. This is coupled with the option to create customized KPI reports for specific business needs.

### Flexibility in concepts

With the option to choose from single modules to a more advanced 4PL set-up.

### System integration

Allows the automation of different business processes between the client's ERP system, carrier and the internet.

## Features

- Comprehensive selection tool and system for making and planning trips for orders
- Map view for trip planning including a simple drag and drop function to re-sequence the trips and to move stops between the trips
- Shipment list with customized shipment details and milestones with respective statuses
- Shipment execution overview including shipment details with equipments, dimensions and references
- Agile application to monitor progress and deviations in transportation routes and activities

## Key Benefits

- Customer driven approach to service development
- Scalability according to business, customers, volume & needs
- Short implementation cycles
- No upfront license, hardware and resource investments required
