

Lynx | Mobility

Lynx Mobility makes it possible for drivers to manage orders, generate electronic signatures and handle claims with the use of a standard smartphone. Its prompt tracking and notification mechanisms along with its sophisticated electronic documentation enhance visibility of routes and optimize resource utilization.

Lynx Mobility is capable of handling several fleet management systems and aggregating information from them, while ensuring fast responses to unexpected events.

Values

Manage orders, scheduling and trips on the fly

The user-friendly mobile application helps drivers to manage, and update the collection and delivery of orders with ease. The scheduling function further informs drivers of the work sequence planned for the trip and the activities which are to be executed at each stop.

Send Proof-of-Delivery (POD) faster and initiate invoices earlier

This is done through an agile event and alerts system which reports disruptions/ anomalies in shipment movements.

Address claims for damages directly

Simply capture and send pictures of the damages via a smartphone.

Complete fleet visualization and management

The Fleet Visualization and Management module monitors the progress of and deviations of vehicles. In the occurrence of unexpected events, information is sent immediately to the control tower.

Key Performance Indicators (KPIs)

Measure pick-up and delivery information by generating KPIs while initiating proactive and corrective decisions in your daily briefings.

Position tracking and POI management

Identify, track and monitor specific positions of interest and other details which might be important in stabilizing a vehicle's route.

Enhance security with close monitoring of transportation and geofencing

The control tower is promptly informed in the event that a vehicle is not following a planned route.

Offline functionality

The application offers full capabilities for drivers even when a network connection is lost.

Key Benefits

- Faster call to action which leads to enhanced customer satisfaction
- Increased back-office productivity
- Short implementation cycles
- Limited capital binding and risks
- No specialised hardware required that drives cost
